SUMMARY

Full Stack Developer specializing in MERN Stack development, RESTful API design, and secure web applications. Experienced in building scalable frontend and backend systems using React.js, Node.js, Express.js, MongoDB, and Python. Strong background in cybersecurity, vulnerability assessment, system design, and AI-powered applications. Passionate about developing high-performance software solutions and secure digital platforms.

SKILLS

Languages: JavaScript, TypeScript, Python, C++

Frontend: Vite.js, React.js, HTML5, CSS3, Bootstrap, Responsive Web Design

Backend: Node.js, Express.js, REST API Design, JWT Auth, Python (Fast API), SQLAlchemy, Celery

Database: MongoDB, MySQL, PostgreSQL, Redis

AI/ML: TensorFlow, OpenCV, Media Pipe, NLP

Cybersecurity: Penetration Testing, Vulnerability Analysis, Secure Coding, Ethical Hacking

Tools: Git, GitHub, GitLab CI/CD, Linux (Ubuntu, Kali), Jupyter Notebook, Docker

DevOps: Docker, Docker Compose, Git, GitLab CI/CD, Linux

EXPERIENCE

Senior Engineer | Stylopedia Technology PVT. LTD.

2024- Present

- Designed scalable REST APIs using FastAPI and Node.js supporting secure authentication, RBAC, and asynchronous processing.
- Built reusable React components improving maintainability and reducing frontend development effort.
- Implemented GitLab CI/CD pipelines and Docker-based deployments to streamline release workflows.
- Optimized PostgreSQL queries and backend services for improved performance when processing financial datasets.
- Collaborated in Agile sprint planning, code reviews, and feature releases across cross-functional teams.

EDUCATION

TRINITY COLLEGE OF ENGINEERING AND RESEARCH

Bachelor of Engineering, Major in Information Technology

Cumulative GPA: 7.5

Pune, India

May, 2025

YASHWANTRAO CHAVAN INSTITUTE OF SCIENCE

HSC (12th Grade) | 82.17 %

Satara, India

May 2021

BHARAT VIDYA MANDIR

SSC (10th Grade) | 71 %

Satara, India

May 2019

CERTIFICATIONS

CYBER SECURITY AND ETHICAL HACKING | Rinex

Sept 5, 2023

ETHICAL HACKER | Cisco

March 7, 2025

FULL STACK MERN DEVELOPMENT | Pregrad

Aug 13, 2024

KEY PROJECTS

Smart CA Audit Assistant

Technologies: FastAPI, Python, React.js, TypeScript, PostgreSQL, SQLAlchemy, Celery, Docker, Redis, JWT Authentication, REST APIs, NLP, Pandas, PDF Processing, XLSX Processing, CSV Processing, Multi-Tenant Architecture, Role-Based Access Control (RBAC)

- Designed and developed a full-stack financial audit automation platform using FastAPI, React, TypeScript, PostgreSQL, Celery, and Redis to process bank statements (PDF, XLSX, CSV) through an asynchronous pipeline for parsing, normalization, classification, ledger mapping, duplicate detection, and Tally ERP export.
- Engineered a rule-based transaction classification engine supporting 18+ financial categories with confidence-based automated workflows, enabling intelligent transaction categorization, manual review, and suspense handling for low-confidence records.
- Built a tenant-aware duplicate detection system using SHA-256 fingerprinting, SQLAlchemy, and paginated batch processing to efficiently identify duplicate transactions across large multi-file financial datasets.
- Developed a fault-tolerant asynchronous processing framework using Celery and Redis with checkpoint recovery, automatic retries, real-time progress tracking, and scalable background job execution for long-running financial document processing.
- Implemented enterprise-grade security using JWT authentication, Redis-based refresh token rotation, OTP verification, rate limiting, MIME validation, structural file verification, and ClamAV malware scanning to secure document uploads and user access.
- Designed a multi-tenant RBAC architecture supporting `ORG_OWNER`, `ORG_MEMBER`, and `END_CUSTOMER` roles with engagement-level data isolation, fuzzy vendor-to-ledger mapping using RapidFuzz, Jinja2-based Tally ERP XML generation, and a Windows Tally Connector for secure bidirectional synchronization.

Cyber Range Lab – Real World Simulation Platform

Technologies: React.js, Node.js, Express.js, MongoDB, Python, REST APIs, Linux, Cybersecurity, Network Security, System Design, RBAC, Secure Architecture

- Designed and developed a modular cyber range platform simulating real-world environments including Metro, Banking, Hospital, and Power Plant systems for cybersecurity training and security validation.
- Engineered role-based workflows, secure authentication, and REST APIs to replicate real-time operational processes, user interactions, and enterprise data flows across multiple simulated environments.
- Performed security analysis and threat modeling to identify potential attack surfaces, security vulnerabilities, and privilege escalation risks within distributed system architectures.
- Built a scalable and reusable architecture enabling independent system modules, future expansion, and seamless integration across multiple simulated enterprise domains.
- Applied secure software design principles, access control, and network security concepts to model realistic cyber attack and defence scenarios for penetration testing and security awareness.
- Implemented modular backend services using Node.js, Express.js, MongoDB, and Python, demonstrating expertise in system design, distributed workflows, secure architecture, and full-stack application development.
